

# CAVE4wine

## New! Cave4wine.

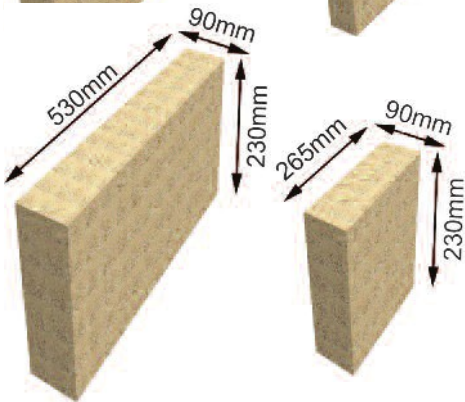

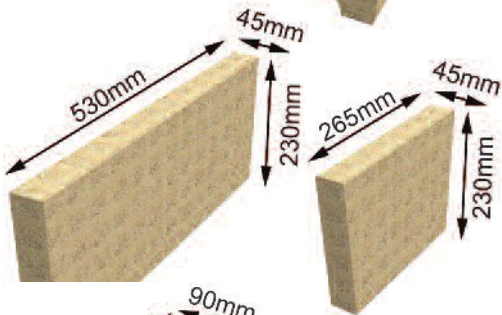

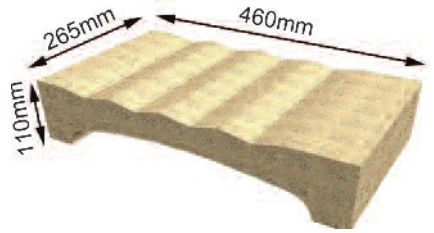

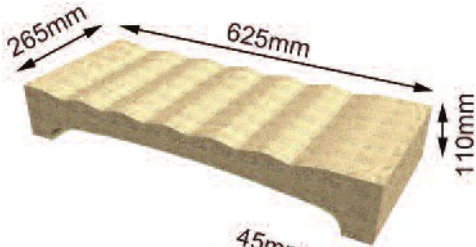

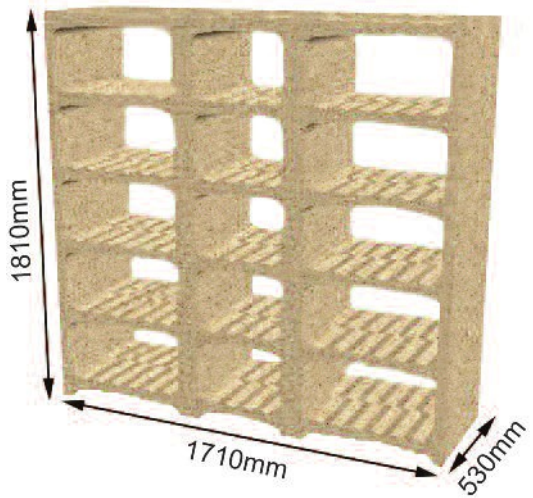

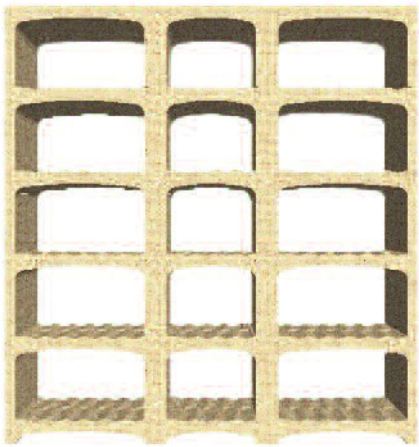

Display your wine with pride

- Traditional cellar look
- Aids optimum storage conditions
- Rugged and stable
- Mix and match to fit any layout
- Dry assembly, repositionable
- Unique to Bacchus Cavovin
- British Made

Bacchus-Cavovin Ltd

Specialists in Wine Storage Solutions

Cave4wine is designed to give the appearance of a traditional cellar as found in many period houses throughout the British Isles. The bins will hold 12 to 44 bottles approximately depending on the style of the bottle. The finish is stone coloured and the construction assists in stabilizing temperature, humidity and vibration.

Our CAVE4wine system is made up from just six shapes with only four pieces required when using single or double depth individually. Single and double bottle depth can be used together, giving the system wide variations in capacity for different lengths and heights.

The stone colour and appearance is similar to the traditional cellars found in Georgian and Victorian houses, a tried and tested format used over many years.

CAVE4wine is made from ground Bath stone, white cement, fine sand, Perlite and a bonding agent Perlite is a natural amorphous volcanic glass sourced from many locations, with Greece followed by China as the main suppliers; it expands up to 16 times its original volume making it an excellent light insulation and an ideal natural material for the manufacture of CAVE4wine.

The benefits of CAVE4wine are good thermal and humidity properties, plus being a firm solid construction, vibration is almost eliminated. Bottles placed in the system are virtually out of any direct light and in most cases the installation is in a location of darkness.

If a different colour is required this can be arranged against a sample although exact matching may be difficult, there is an additional cost of approximately 15%. It is not recommended that the system is painted as this will reduce the effect of the humidity control and add unnecessary maintenance to a product that is trouble free. Internal reinforcing is in stainless steel and the simple pins used to give vertical location are in 6mm plastic rod.

NOTE:

All deliveries are on a pallet and to a hard level surface accessible to a 7.5 tonne tail-lift lorry, it is important to advise any difficulty in getting access to a drop-off location. Installation of the CAVE4wine system is very simple, but it is essential that there is a level load-bearing surface.

We do offer an installation service if required, cost depends on the location.

CAVE4wine is a hand made product and therefore there can be small variations in colour and minor casting defects, these all add to its rustic appearance.

Capacity and dimension table								
Width	4 Bottle	6 Bottle	Approx. No.	Level & Ht	Level & Ht	Level & Ht	Level & Ht	Level & Ht
Ht	460mm	625mm	of bottles	2=790mm	3=1130mm	4=1470mm	5=1810mm	6=2150mm
460	1		16	32	48	64	80	96
625		1	23	46	69	92	115	138
920	2		32	64	96	128	160	192
1085	1139			78	117	156	195	234
1250		2	46	92	138	184	230	276
1380	3		48	96	144	192	240	288
1545	2165			130	195	260	325	390
1710	1262			124	186	248	310	372
1840	4		64	128	192	256	320	384
1875		3	69	138	207	276	345	414
2005	3171			142	213	284	355	426
2170	2278			156	234	312	390	468
2300	5		80	160	240	320	400	480
2465	4187			174	261	348	435	522
2630	3294			188	282	376	470	564
2760	6		96	192	288	384	480	576
2795	23101			202	303	404	505	606
2925	51101			202	303	404	505	606
3090	42110			220	330	440	550	660

Note due to the current trend of varying bottle sizes, bottle capacities may vary. Capacities are based on the standard Bordeaux bottle and for single depth bins. Double depth bins multiply by two. Single depth = 265mm, Double depth = 530mm. We offer a free of charge, a design service from dimensioned sketches, site visits will be subject to a fee depending on location.

October 2011 cost excl delivery Single = £1592.20 = £3.16 per bottle stored Double = £2686.50 = £2.66 per bottle store.
